SUBLIMATION

Printing

When using SubliJet refer to the PowerDriver Manual or if using ArTainium or another brand of ink use the instruction manual provided from the vendor you purchased your ink from. All images should be MIRRORED unless specified below.

Important

When the image is printed, it may look dull on the paper—this is normal. Trim the image to make it easier to position on your item. Secure your image to the object with heat tape to keep it from slipping or shifting. Protective plastic sheet on the insert must be peeled off before use with CL Hard Surface I or sublimation.

When pressing is done, Open the press slowly and gently remove the object and remove the paper (be careful not to let the paper shift across the surface of the object, or you may create a “ghost” image). When the object is removed from the press, just let it cool.

Heat Press Setup

Set your heat press to 400F. Before pressing, test the pressure. The pressure should be light. Ensure that your press has reached 400F before pressing.

Protect your heat press with at least two pieces of plain paper underneath your substrate and on top of your substrate.

Pressing

Press Temperature: 400F | Press Time 30 seconds

- 1.) Place two pieces of plain paper on your heat press.
- 2.) Tape imaged sublimation paper to the shopping bag with heat tape.
The printable sides should be facing each other.
- 3.) Place the shopping bag with taped imaged sublimation paper in heat press with the paper on top
- 4.) Place a piece of plain paper on top.
- 5.) Press at 400F for 30 seconds
- 6.) Once pressing is done, immediately peel off sublimation paper.
- 7.) Leave shopping bag to cool on a table
