

Silicon Card Holder

SUBLIMATION

Printing

- Print Mirror Image
- Print using heavy to Label mode depending on the printer you are using.
- Once printed, ensure that the toner has adhered properly to the paper.

Important

Trim the image to make it easier to position on your item. Secure your image to the object with heat tape to keep it from slipping or shifting.

It is very important that heavy and even pressure is applied to the substrate and paper. Also when peeling, you do so with a smooth consistent motion.

Heat Press Setup

Set your heat press to 360F. Before pressing, test the pressure on a blank Silicon Card Holder insert. The pressure should be medium. Ensure that your press has reached 360F before pressing.

Protect your heat press with at least one piece of plain paper underneath your substrate and another on top of your substrate.

Pressing

Press Temperature: 360F | Press Time 120 seconds

- 1.) Place two pieces of plain paper on your heat press.
- 2.) Place white fabric insert on heat press with printable side (white side) face up.
- 3.) Tape imaged sublimation paper on top of fabric insert with image face down
- 4.) Place another piece of paper on top
- 5.) Close your heat press
- 6.) Once pressing is done, leave on a cold surface to cool
- 7.) Peel transfer paper warm or cold

Application to Card Holder

Attaching the insert to your card holder:

- 1.) Attach the imaged fabric insert onto the cover by removing the protective covering to expose the adhesive and firmly set the insert onto the cover.
